Thank you for requesting information on **The Chesapeake Light** - a coastal home inspired by the residential lighthouses of the Chesapeake Bay.

I have developed this unique home design especially for people who share my love for the Chesapeake Bay and the nostalgic lighthouses which once lined her coast.

The enclosed information provides an overview of The Chesapeake Light and the INTEGRATED FRAME & PANEL building system which makes practical the building of this complex design. The backbone of The Chesapeake Light is the engineered building system of interlocking posts, beams and panels. Her design features walls of windows, vaulted ceilings with exposed beams and planked ceilings, second floor lofts and a central circular stairway winding it's way to the lookout projecting above the roof. A wide variety of design options are available. The building system produces a structure which is rock solid and air tight, perfectly suited for harsh coastal weather.

The INTEGRATED FRAME & PANEL building system has been developed over a period of several years

The design is available with a wide variety of options, allowing flexibility in choosing the home best suited for your requirements.

I would welcome the opportunity to provide additional information and a design proposal at your request.
